The power to transform your business
Optimus 2020 continues to be the number one choice for litho and packaging printers worldwide. What is the secret of our longevity? Constant research and forward thinking development to ensure we consistently supply relevant innovative software solutions combined with excellent customer service and a passion and knowledge of the printing industry.

Optimus 2020 is a modular system as we understand that one size does not fit all. We ensure our solutions fit your specific requirements, with the added benefit of scalability for Optimus 2020 to grow with your business.

Optimus 2020 – The Power to Transform your Business!

Optimus 2020 is fully JDF compliant using Estimating Pro+ to send JDF messages to pre-press, press and post-press workflow systems. JMF Messages are received back into the Optimus production job ensuring that all essential data is automatically captured.

The All Important Management Information
Optimus Estimating Pro+

Optimus Estimating Pro+ provides an intuitive, rules based tool to produce both complex and detailed quotations. Suitable for both experienced Estimators and, due to the intuitive set of questions posed, also suitable to be used by those staff with less estimating specific expertise. Estimating Pro+ uses the information present within Optimus regarding resources and methods of working to present the most efficient method of producing the job. Consistency is essential and this is achieved from the information provided within Optimus including cost rates, wage rates, materials and running speeds.

A comprehensive range of Pricing Targets is available to provide the Estimator with all relevant costs to allow a pricing decision to be made.

From the Estimate creation, once priced, a quotation letter is automatically created using Microsoft Word™ and once accepted, creates a full production job complete with all the required information including technical specification, job ticket, invoice value and each production task to complete the job, all without re-keying.

OPTimus Packaging Estimating

Catering for the specific requirements of Companies who produce folded cartons, Optimus Packaging Estimating is suitable for all Estimating Staff as it provides an intuitive set of questions in order to automatically build each element of the estimate by layer, part and operation, thereby providing speed without compromising flexibility in the creation of the final estimate.

Optimus Packaging Estimating pulls information from within the Optimus system including cost rates, wage rates, materials and running speeds to ensure consistent and accurate estimates. The additional flexibility of allowing the Estimator to define the sequence of the production processes ensures that the widest possible requirements can be accommodated. A comprehensive range of Pricing Targets is available to provide the Estimator with all relevant costs to allow a pricing decision to be made.

From the Estimate creation, once priced, a quotation letter is automatically created using Microsoft Word™ and once accepted, creates a full production job complete with all the required information including technical specification, job ticket, invoice value and each production task to complete the job, all without re-keying.

Optimus Customer Services

Optimus recognises the need for our customers to provide excellent service, which is essential for customer retention and satisfaction. Optimus Customer Services ensures access to all information which may be required in a real-time customer centric view; so that customer facing staff can confidently give immediate feedback on current and historical information.

Optimus Customer Services is specifically designed for users receiving telephone enquiries and provides visibility on all transactions with a customer including quotations, jobs, proofs, deliveries, invoices, stock levels and sales orders.

OPTimus CUSTOMER Services PROVIDING INSTANT INFORMATION AND INSTANT CUSTOMER SATISFACTION!
Optimus Job Comments provides the facility to allow users to record free text comments when required. This ensures the most accurate information is always available whilst producing the job and is available for repeat work. Optimus Job Comments enhances communication between departments and ultimately to the customer as the job progresses.

Optimus Job File Folders provides the facility to hold multiple low resolution images, documents and files accessible within the Optimus job screen. This, for example, can be used to ensure that all production staff and customer facing staff have a visual representation of how the job will appear.

Job Ticket

We understand the job ticket is the bible of a production job and therefore is the key to ensuring smooth production; that is why we have ensured the job ticket was designed for maximum flexibility! The Optimus Job Ticket allows the user to define what information is required to be published including: bar codes, technical specification, special instructions, imposition diagrams, proofs, materials, outwork and packing.

Optimus Despatch is designed to provide complete visibility and control of all despatch activities including finished goods, deliveries to outwork suppliers and from outwork suppliers to customers, and even deliveries between customers!

In one screen, a list of delivery requirements including scheduled delivery date, proposed delivery method, weight, quantity and description of the items are all available to view.

Delivery requirements are created within the production job or within the Despatch Module, with each delivery requirement allocated a delivery method, to enable the fast creation of the delivery schedule by date and method.

Each delivery requirement is progressed through a series of statuses and once scheduled; the delivery note and labels are available for printing. Once printed, the schedule will reflect the delivery is ready for despatch.

Once despatched, with one click, the delivery requirement is marked as delivered and the production job is automatically updated with a date and time stamp.

THE OPTIMUS PRODUCTION SYSTEM PROVIDES COMPLETE TRANSPARENCY AND CONTROL, RESULTING IN EFFICIENT AND COST EFFECTIVE PRODUCTION!
Optimus 2020
Allowing You To Stay Connected And In Control

Optimus Remote Data Collection (RDC)

Optimus RDC facilitates the recording of actual time spent on each task by all production staff, ensuring accurate costs and produced quantities, where applicable, are collected on each production job.

Optimus RDC is a web-based application with a clear and simple interface, for staff to identify themselves and the task that they are working on. Once identified, Opti

Optimus Task Diary

Specifically designed for Production Management, the Opti Task Diary provides instant, easily accessible filtered views of individual tasks and associated data, to facilitate production planning.

Driven by tasks required to complete a job, information is provided in one screen for every task, proof, material requisition and any job information surrounding the task. Additional information including estimated time and actual time taken, together with estimated and actual quantities is also provided.

Multiple filters, sorts and display options that can be saved and re-used are available giving an instant, printable work-to-list, with the ability to set target start and finish dates and times and display material requisitions.

Optimus Prestige Scheduler

A feature-rich Planning System, providing real-time dynamic scheduling and capacity planning functionality that can be used as stand-alone or integrated with Opti

Optimus Prestige Scheduler offers a host of benefits including:

- Forward and backward scheduling
- Production of Work to Lists
- Direct updates from OptiConnect, OptiRemote Data Collection and OptiJDF
- Direct updates back to OptiJob Management System
- The ability to generate a "What if" scenario
- Publishing of the approved Schedule to view
- Group processes or job parts that must stay together

OPTIMUS - GIVING PRODUCTION MANAGERS COMPLETE VISIBILITY AND CONTROL!
Optimus Purchase Order Processing

A comprehensive and easy to use purchasing system, Optimus Purchase Order Processing facilitates efficient purchasing and effective procurement by recording and monitoring all requisitions and purchase orders for any item required.

When a job is created, requisitions for materials and outwork are automatically generated. Where there are insufficient stock levels, the Optimus Stock Management System presents the information in the Optimus Purchase Order Processing module, which is then converted into a purchase order and can be raised by job or supplier on a daily basis or on demand.

Purchase Order statuses are easily identified by icons within the Purchase Order screen and can be printed or emailed directly to the supplier.

The Optimus Purchase Order Processing Module’s flexibility allows for both centralised and non centralised purchasing.

Optimus Purchase Order Approvals

An easy to use additional Module which introduces spending authority controls on the purchasing power of buyers within the Print Business.

Optimus Purchase Order Approvals gives complete control over who can raise and/or approve purchase orders for set values and set product categories. Spending limits are assigned to individuals based on the Company requirements. Restrictions are placed on progressing purchase orders raised if the relevant authority is not permitted, thus preventing unapproved orders being sent to suppliers.

The Buyer raising the Purchase Order can quickly identify within the Module who has the authority to progress the order. With a simple click they can send an automatic email with the order details to inform the authoriser that approval is required, ensuring there are no delays in ordering material required.

Optimus Sales Order Processing

The Optimus Sales Order Processing System gives control of sales orders for all saleable stock items, regardless of whether the items were produced in house or purchased as finished goods for resale. The seamless integration with Optimus Stock Management and Optimus Job Management System ensures maximum production and buying efficiencies.

Optimus Sales Order Processing allows the simple and controlled handling of: Customer Call Off’s, complete management of Bill and Hold stock, simple batch generation of Sales Order Invoices and flexible pricing options including contract prices, break point prices and special prices.

When a sales order is created, a visual display of all items is available together with current stock levels. Also included are stock quantities allocated to other deliveries, ensuring that only unallocated stock is available for sale. Where stock levels need to be replenished, the user will automatically be presented with the option to select suggested alternatives or requisitions are raised and passed to Optimus Purchase Order Processing to generate the required Purchase Order.

Contract or standard prices are automatically checked when the order is created thus negating the need for manual pricing intervention.

Pick and Pack Lists are easily produced identifying the goods required and the location with delivery notes produced when the order is ready for despatch. The deliveries ready to despatch appear on a Delivery Schedule, ensuring full transparency of delivery requirements for the Despatch Team. Once delivered, the order is ready for invoicing, with the invoice detail available from the Sales Order, thereby negating re-keying.

Optimus Job-Sales Order Link

The Job-Sales Order Link provides essential functionality to enable the complete tracking of all transactions associated with the job, stock items and sales orders.

When a Sales Order is generated, available stock and/or current production jobs are shown which fulfil the sales order requirement; equally, if a production job is generated, available stock and/or sales orders raised are displayed, thereby ensuring that the user has complete visibility of stock levels, sales orders and production jobs associated with the stock item in one screen.

Optimus Job-Sales Order Link provides essential functionality to enable the complete tracking of all transactions associated with the job, stock items and sales orders.

When a Sales Order is generated, available stock and/or current production jobs are shown which fulfill the sales order requirement; equally, if a production job is generated, available stock and/or sales orders raised are displayed, thereby ensuring that the user has complete visibility of stock levels, sales orders and production jobs associated with the stock item in one screen.

OPTIMUS PURCHASING SOLUTIONS – KEEPING YOU IN CONTROL OF YOUR COSTS!
Optimus Sales Invoicing and Chargeable Items

Optimus Sales Invoicing is a comprehensive invoicing tool allowing the fast production of sales invoices – vital for healthy cash flow!

Sales Invoices are produced from Chargeable Items, in turn, the Chargeable Item is automatically created when a job is created from a quotation. This not only negates the need for re-keying as all text originating from the quotation appears, but also ensures the customer is charged with what has been agreed in the accepted quotation. Also, with the flexibility that Optimus is famous for, additional chargeable items can be quickly created should there be any ‘extras’ to be charged as the job progresses. This ensures that all relevant charges are captured and passed onto the customer.

Sales Invoices can be consolidated for those customers wishing to receive one invoice or, can be individual on a job by job basis. Invoices are produced and printed within Optimus and released to the chosen Accounting System in a controlled environment, using the Optimus Accounts Link. Optimus will not allow duplicate posting to the Accounting System as only those invoices printed can be released.

Within Sales Invoicing, a cost/price analysis is available to view, showing profitability, added value and contribution as a table, summary or graphical display of estimated, actual and variances for each chargeable item type, thus giving the vital information to understand the profitability of each charge made to customers.

Optimus Purchase Invoice Reconciliation

Optimus Purchase Invoice Reconciliation allows all receipts from Purchase Orders raised in Optimus to be matched to the relevant purchase invoice. This ensures that the purchase invoice is accurate and the cost is as expected. If the value or quantities on the invoice differs from the receipt, a warning is displayed.

The purchase invoice, once matched to receipts, must progress to an approved status ensuring that costs recorded on the production job are accurate for margin and profitability analysis. Equally, only approved invoices can be released to the Accounting System.

A report of goods received with no purchase invoice received is available, giving a fast and simple tool to calculate the month end accrual for the financial accounts.

Optimus Accounts Link

The importance of providing an Accounts Link that is secure and easy to use, with the benefit of seamlessly integrating to Optimus ensures there is no re-keying, thereby increasing accuracy and data integrity.

The unique open architecture of Optimus is designed to maximise integration opportunities, as we understand that Accounting Systems are a personal choice which must be accommodated.

Customers, suppliers and nominal/general ledger codes are mapped between Optimus and the Accounting System to ensure transactions raised in Optimus are posted to the correct sales, purchase and nominal/general ledger accounts within the Accounting System.

Optimus Accounts Link not only posts to the chosen Accounting System, but can also receive information back e.g. Credit Control which is a permission driven module and can warn the Optimus user when a job is booked in, if the customer has exceeded credit terms. This is calculated from the current debtor status and credit limit set within the Accounting System, together with value of jobs and sales orders, value of work in progress and the current job value from within Optimus.

OPTIMUS FOR GREATER FINANCIAL CONTROL, INCREASED CASH FLOW AND DATA INTEGRITY!
Optimus Desktop Alerts

Optimus Desktop Alerts provide instant, easy access to key information on all areas of the business using a traffic light view on the Optimus home screen. Alerts are defined by the user’s role, ensuring only those relevant to the user are shown.

Desktop Alerts does exactly what the name implies; it alerts the user to current key activities at a glance, that may need immediate action, thus ensuring that any potential issues can be addressed before they become a business risk.

Optimus Work in Progress Summary

Providing an instant snapshot of work in progress, an overview of cost statistics and the number of jobs to be completed together with jobs overdue, enables a complete real-time view of the total order book.

Optimus Work in Progress Summary is continuously updated with materials issues, outwork purchased and time booked to each job, ensuring that an accurate picture of work to be completed is always available. Equally, a separate view showing an order book turnover prediction includes both complete and incomplete jobs in the month, enabling management to forecast turnover on a daily basis if required.

Optimus Vision – Key Performance Indicators

Optimus recognises the need to encompass best business practice and have worked closely with Vision in Print, a UK organisation promoting Lean Manufacturing principles to the UK Printing Industry.

Optimus Vision is designed to translate the wealth of information in Optimus, to identify key performance indicators vital to the continuous monitoring and improvement of key operational areas of the business.

The Key Performance Indicators are provided in a dashboard view, with the ability to drill down on each KPI for maximum benefit and includes:

- Overall Equipment Effectiveness
- Not Right First Time
- Job Bag Queries
- On Time in Full (deliveries)
- People Productivity
- Value Added per Person
- Stock Turns
- Floor Space Utilisation

Optimus Sales Analysis

Optimus Sales Analysis is designed to provide instant, easy access to key sales performance statistics and is driven by the invoiced revenue of the Company.

A real time breakdown of sales achieved in both numerical and graphical display is available, with multiple filters and display options, giving an instant view of sales statistics by customer, product lines, representative and geographical area. Further detailed analysis of sales to added value, wage costs, contribution and profitability makes Optimus Sales Analysis the essential tool to monitor sales and profitability.

Optimus Transaction Analysis

Optimus Transaction Analysis is designed to provide instant, easy access to production costing statistics and is driven by actual costs recorded. A real time breakdown of production time, materials and outwork costs incurred in both numerical and graphical display is available, with multiple filters and display options, giving an instant view of cost statistics and trends by date, customer, department and resource.

Whether daily, weekly, monthly, annually or year on year, Optimus 2020 provides key analysis to assist in making informed, strategic decisions.

OPTIMUS PROVIDING ALL MANAGEMENT INFORMATION REQUIREMENTS!
